SA2000 BATTERY TESTER

Code: **MAA02XXXX0088**

Check the condition of 12V batteries using the conductance method. Unlike the conventional method that applies a load to the battery, this device sends a series of voltage pulses to the battery and observes the flow of alternating current that receives return.

The advantages of this method are:

- Conductance is directly related to battery capacity
- Passive test method is completely safe
- Does not discharge the battery
- Can test also low battery
- Results are easy to read and repeatable
- Provides a complete overview of the battery status, also you can test on the system of starting and charging of vehicles at 12V

Scope of application: 12V battery test starting. Lifepo4 batteries only motorcycle.

The device requires no maintenance and is powered by the battery itself during the test.
