BODYWORK KIT 4 TON 444000

Code: **MOF01XXXI0021**

The contents of the kit are neatly stored in a sturdy ABS case. The extensions have connections with very low tolerances, are in excellent steel and have a good thickness. This allows to obtain high thrusts even in the presence of more extensions used. Indispensable in bodywork repairs, even with the use of modern firing tables. The complete availability of spare parts and the high quality of the hydraulics ensure a long operational life for these professional tools.

Operating pressure 700 bar

TOSI SNC
