MaxiSys MS919

Code:

The MaxiSys MS919 is equipped with a 10" touch screen and Android 7.0 operating system powered by an Octa-core (2.3GHz Quad + 1.7GHz Quad) processor, with 128GB internal memory, to provide diagnostic assistance, component testing and confirm the repairs. The new VCMi MaxiFlash works as a 4-channel oscilloscope, waveform generator, multimeter and CAN BUS tester. The MaxiSys MS919 software provides a large archive of predefined guided tests and an equally detailed archive of waveforms, to make the most of the Oscilloscope function. This improved software beats the competition by not only providing DTCs and specific sensor test options for more accurate diagnoses, but also by providing probes and component wiring diagrams so technicians can work plugged in correctly. • 24 months Warranty • 12 months of Updates • 12 months of telephone assistance
