**LIFT SC500**Code: **ASO05XSXX0000**

SC500 is a PROFESSIONAL lift for motorbikes and scooters, equipped with a front wheel cantilevered stop to ease the positioning of the motorbike, a lowered manual vice and a removable rear window to ease wheel extraction. The 70 cm wide boarding ramp, made in non-slip checkerboard sheet metal, is equipped with a sliding system on solid rollers which makes it completely retractable. The fulcrum pins are complete with grease fittings. The central support part of the lift is equipped with an aluminum anti-slip protection. Side storage trays are standard. The mechanical safety system is composed of a double toothed rack with pneumatic release and a parachute valve inside the piston. The hydropneumatic pump is mounted under the platform in order to minimize the space required for the lift and is operated by a dead-man control.
