CHARGER LITHIUM XS

Code: **MAA02XXXX0010**

Modern batteries Lithium-Iron-Phosphate (LiFePO4) require special charge cycles in order to provide maximum performance and last longer. CTEK has modified its cycle patented in eight stages and presents today a specific charger for this technology, the LITHIUM XS. Fully automatic, it requires no programming to load perfectly LiFePO4 batteries from 5 to 60Ah, and keep those in office up to 120Ah capacity. The initial phase ensures the correct dialogue with the BMS (Battery Management System) of which these batteries are usually equipped, and the final stage of charging is specifically designed to restore its full capacity even after months of inactivity.
